Mini Micro O-bar and Seat

by [THENATURALMUMMYFILES](#) posted on [JANUARY 2, 2012](#)

I love this new accessory for the Mini Micro Scooter. We got my 3 year old a Mini Micro Scooter after reviewing the [Micro Scooter](#) for my 9 year old. She absolutely adores her Mini Micro Scooter, and wants to take it everywhere.

The Mini Micro [O-bar and seat](#) is an excellent idea. Alone the scooter is suitable for children aged 3 – 5, but the O-bar and seat makes it suitable from 1-5. From 1 year your child can use the scooter and seat. It is a mini ride-on toy. Then from 2 years the seat can be removed (if desired) and can be used as a scooter with the O-bar alone. From 3 years the child can use the T-bar that comes with the scooter.

The T-bar to the scooter comes off very easily in one click, and without any screws or small fixtures. The O-bar and seat clip onto the scooter just as easily. I was very impressed at how sturdy the seat is. It is held onto the O-bar only on one side and successfully takes the child's weight. It is a great way to use the scooter indoors.

Like the Mini Micro scooter itself, the O-bar and seat is very very strong. I am confident that it will not be broken. It is low down enough for my 1 year old to climb on it, and is not a high fall if she falls off, and it still works for my 3 year old.

The [Mini Micro Scooter and O-bar and seat](#) can be bought together for £74.95, or the [O-bar and seat](#) alone, if you already have the scooter, for £29.95. This may seem a steep price at first but due to the excellent quality and design of this product, it will last your child for years, and through subsequent children too. (One £20 scooter of a different brand, that I bought for my then 6 year old, fell apart after a year). It is a unique design and well worth the investment.
